

# NATURAL AND CULTURAL HERITAGE OF COASTAL ZONES

## INTEGRATION ASSESSMENT MAPPING PLANNING MANAGEMENT POLICY

28 JULY - 1 AUGUST 2008

Cambridge Centre for Landscape and People (CCLP)

The international interdisciplinary intensive course on natural and cultural values of coastal zones offers a novel approach to the analysis, evaluation, mapping, planning and management of world coastlines with the view to preserving their natural and cultural values, including their landscapes, beauty, ecosystems and services.

Conservation of natural and cultural heritage in coastal areas requires a holistic interdisciplinary approach able to provide prevention of, and responses to, natural and human hazards. The course embraces this concept with innovative methods, tools and measures which can foster both sustainable development and biocultural conservation.

Researchers, professionals, governmental and NGO officers who are engaged in the study, assessment, planning, management and policy making of coastal zones are invited to participate in this interdisciplinary certified course. Contributions and outcomes will be selected for scientific publication. Deadline for registration: 10 June 2008. After this date: contact [cclp.course@geog.cam.ac.uk](mailto:cclp.course@geog.cam.ac.uk)

Course organised by: University of Cambridge, UK and Sapienza University of Rome, Italy, and held at Darwin College, Cambridge, UK <http://www.cclp.group.cam.ac.uk/courses.html>
